

MY CHART WRITER

software has three objectives:

ERROR REDUCTION Because MY CHART WRITER office notes are created using a template format, there is a standardization to each office visit. Unlike handwritten and dictated SOAP notes, MY CHART WRITER templates are designed in a standard format that enables users to enter information in a uniform manner while prepopulating and correcting as the clinical staff fills out the note. This also improves readability by other providers, shortens the time needed to prepare the note, and improves accuracy.

PRACTICE EFFICIENCIES Exam times are reduced because information, like drug interactions, appointments, and diagnosis codes, is available on the spot.

PATIENT DATA MY CHART WRITER centralizes patient data into one location: the patient's chart. This allows users to run administrative reports, access patient information quickly, and efficiently send and receive patient documents.
